

Problem 2

In each of Problems 1 through 6, sketch the graph of the given function on the interval $t \geq 0$.

$$g(t) = (t - 3)u_2(t) - (t - 2)u_3(t)$$

Solution

This function can be written in terms of the more familiar Heaviside function, $H(t)$, which is defined to be 1 if $t > 0$ and 0 if $t < 0$.

$$g(t) = (t - 3)H(t - 2) - (t - 2)H(t - 3)$$
