

Exercise 36

Problems 35 and 36 require some knowledge of chemical notation.

- Write the chemical equation $p\text{C}_3\text{H}_4\text{O}_3 + q\text{O}_2 = r\text{CO}_2 + s\text{H}_2\text{O}$ as an equation in ordered triples with unknown coefficients p , q , r , and s .
- Find the smallest positive integer solution for p , q , r , and s .
- Illustrate the solution by a vector diagram in space.

Solution

Let the ordered triplet (x_1, x_2, x_3) represent the number of carbon, hydrogen, and oxygen atoms, respectively.

$$\begin{aligned}p\text{C}_3\text{H}_4\text{O}_3 + q\text{O}_2 &= r\text{CO}_2 + s\text{H}_2\text{O} \\p(3, 4, 3) + q(0, 0, 2) &= r(1, 0, 2) + s(0, 2, 1) \\(3p, 4p, 3p) + (0, 0, 2q) &= (r, 0, 2r) + (0, 2s, s) \\(3p, 4p, 3p + 2q) &= (r, 2s, 2r + s)\end{aligned}$$

Match the vector components.

$$\begin{aligned}3p &= r \\4p &= 2s \\3p + 2q &= 2r + s\end{aligned}$$

Solving this system of equations yields

$$p = \frac{s}{2} \quad \text{and} \quad q = \frac{5s}{4} \quad \text{and} \quad r = \frac{3s}{2}.$$

In order for all the coefficients to be the smallest integers, set $s = 4$. Then

$$p = 2 \quad \text{and} \quad q = 5 \quad \text{and} \quad r = 6.$$
