Problem 10

In each of Problems 5 through 10, draw a direction field for the given differential equation and state whether you think that the solutions are converging or diverging.

\[
y' = \frac{y^2 + 2ty}{3 + t^2}
\]

Solution

The direction field is a two-dimensional vector field that shows what the direction of the solution is at every point in a region. Every solution to the differential equation is a curve drawn such that the direction field vectors are tangent to it at every point.

\[
\langle dt, dy \rangle = \left\langle 1, \frac{dy}{dt} \right\rangle dt = \left\langle 1, \frac{y^2 + 2ty}{3 + t^2} \right\rangle dt
\]

Figure 1: In red are the direction field vectors and in blue are possible solutions to the differential equation, depending what the initial condition is. All solutions appear to diverge as \( t \to \infty \).
